技术规格

Background:	This gene encodes one of the major intermediate filament proteins of mature astrocytes. It is used as a marker to distinguish astrocytes from other glial cells during development. Mutations in this gene cause Alexander disease, a rare disorder of astrocytes in the central nervous system. Alternative splicing results in multiple transcript variants encoding distinct isoforms.
Applications:	ELISA, WB
Name of antibody:	GFAP
Immunogen:	Synthetic peptide of human GFAP
Full name:	glial fibrillary acidic protein
Synonyms:	ALXDRD
SwissProt:	P14136
ELISA Recommended dilution:	5000-10000

WB Predicted band size:	50 kDa
WB Positive control:	Mouse brain tissue lysate
WB Recommended dilution:	200-1000
